25X1

corresponding to a production value of RM 2,603,232 & RM 646,500

comment: The total of column I (explosives) is actually 280 kilograms lower than indicated, while the total of column II (fuse cord) should read 13,407,704 meters. The discrepancy of one million meters is presumably due to a typing mistake in one of the figures of this column.

3. The original monthly production quota for this factory had been set at 2,000,000 meters of fuse cord and 250 tons of explosives; the latter figure was later raised to 400 tons. The factory was unable to fulfill the quota, since its pre-war installations are equipped to produce only 150 tons of explosives and 1,000,000

meters of fuse cord a month, and since the reconstruction work ordered by the SMA had not yet been carried out.

25X1 Comment: A report received a few months ago mentioned that this factory was making rock-blasting and safety-mining explosives.

25X1 4. Order | of the SMA listed the raw materials 25X1 and their amounts which should be made available to the Sprengstoff & Zuendschnur-Werke by the government of Saxony. Column I below gives the amounts of raw materials actually received, while 25X1

column II shows the quantities which, should have been made available.

25X1

	I kilos	II kilos
Ammonium nitrate	2,145,203	3,840,000
Sodium nitrate	10,000	240,000
Dinitrotoluene	17,020	210,000
Trinitrotoluene	244,430	672,000
Glycol	82,881	300,000
Mixed acids	400,750	
Paraffin	38,700	1,200,000
Coal tar	38,700 87,860	48,000
Sawdust	07,000	•
Pure cond thread (Mindentum	54,813	144,000
Fuse cord thread (Zundschnu	rgarn) 136,896	

The Pulverfabrik Freiberg manufactured during 1947

67,234 kg., value RM 60,511 26,469 " " 26,469 93,703 kg. value RM 86,980 Priming powder Blasting powder Total production

- The monthly production quota of this plant, employing only twenty-four workers, had been set at 20 tons of black rowder, intended for use in fuse cords and for rock-blasting. This is a very obsolete plant, still dependent upon water power, which, even under the most favorable conditions, could never produce more than 10-12 tons of powder a month.
- The Zuendschnurfabrik Bruecker & Zinke, Meissen, is under reconstruction. It was scheduled to start operating 1 February 1948 with a crew of approximately thirty. 25X1
- The current consumers of explosives are given below with the total quantities received by them in 1947.

kilos Soviet AGs 110,225 Lime, brick, potash, and kaolin plants, salt mines, sand quarries, and gypsum pits Iron, copper, and zim mines Quartz, porphyry, and other quarries Forestry and wood clearing (clearing of 42,890 80,410 tree stumps, etc.) Coal industry Construction industry, demolition-clearing work. and other consumers Total

Comment: These figures are evidently incomplete: see para 2
The destination of the remaining deliveries is not indicated.
